

Jain Plastic Butterfly Valve

Lightweight and Compact

Fast Acting : The valve can be fully closed or opened with a 90° rotation of the handle mechanism

Butterfly valve is made up of Engineering plastic material

Non corrosive

New "New Jain Plastic Butterfly Valve" butterfly valves are valuable components in irrigation systems due to their ability to control water flow, quick shut-off capabilities, ease of installation and easy maintenance.

Applications

Butterfly valves are used in irrigation systems to regulate the flow of water to different sections of agricultural fields, optimizing water distribution for crop growth.

Features

- Low Maintenance Requirements
- Simple design,
- High strength
- Requires minimum space for Installation
- Maximum pressure rating 10 kg/cm²
- Available in 3"
